Permit Requirements for Movement of Manure and Litter Off of a Non-infected Farm in AI Control Areas

Manure and litter can be moved off non-infected poultry farms in a Control Area with an approved permit to move. Negative AI test results for the farm must be confirmed before the permit is issued.

Requests must include:

1. **Origin.** This is the farm location where the manure or litter is currently located.
2. **Destination.** The destination location can be one of two options:
   - The address of the company or business that will be moving/spreading the litter or;
   - The destination site if the litter is going for incineration.

One permit will be issued to move manure or litter from one farm and will be valid for three days. If additional time is needed, another permit must be issued.

All requests should be submitted 24 – 48 hours prior to the desired movement.
